

# iPhone 4 (GSM/AT&T) – Screen Replacement (iFixit: <http://tinyurl.com/a9l6j73>)

Notes (read these each and every time, it is easy to forget a few of these items):

- Use a separate clean sheet of paper to do the tear down on.
- Make sure to put this part sheet off to the side and DO NOT bump it.
- There is not a spot on this part sheet for the back cover or the battery.
- In steps 18 / 19 watch for the little rubber piece (it is under the digitizer and LCD cable from step 17).
- Don't forget to move the ear piece mesh from your old screen to your new screen (x-acto helps).
- Don't forget to peel the film off the back of the new screen just before install.
- In step 30 you must make sure the digitizer and LCD cables are pulled completely through the frame.
